

## 5.7 The Second Derivative Test

Calculus

Name: \_\_\_\_\_

**CA #2**

**Find the extrema by using the Second Derivative Test. Justify your answer.**

1.  $f(x) = x^3 - 3x^2 - 1$

2.  $h(x) = x^4 - 4x^2 + 4$

3.  $g(x) = 2\sin x + \sqrt{3}x$  on the interval  $[0, 2\pi]$

4.  $h(x) = -x^3 + x^2 - 4$

<p>Rel min at <math>x = \frac{\pi}{6}</math> because <math>f'( \frac{\pi}{6}) = 0</math> and <math>f''( \frac{\pi}{6}) &lt; 0</math>.</p> <p>Rel max at <math>x = \frac{\pi}{2}</math> because <math>f'( \frac{\pi}{2}) = 0</math> and <math>f''( \frac{\pi}{2}) &gt; 0</math>.</p> <p>Rel min at <math>x = \frac{5\pi}{6}</math> because <math>f'( \frac{5\pi}{6}) = 0</math> and <math>f''( \frac{5\pi}{6}) &lt; 0</math>.</p> <p>Rel max at <math>x = \frac{7\pi}{6}</math> because <math>f'( \frac{7\pi}{6}) = 0</math> and <math>f''( \frac{7\pi}{6}) &gt; 0</math>.</p> <p>Rel min at <math>x = 2</math> because <math>f'(2) = 0</math> and <math>f''(2) &lt; 0</math>.</p> <p>Rel max at <math>x = 0</math> because <math>f'(0) = 0</math> and <math>f''(0) &gt; 0</math>.</p> <p>Rel min at <math>x = -\sqrt{2}</math> and <math>x = \sqrt{2}</math> because <math>f'(\pm\sqrt{2}) = 0</math> and <math>f''(\pm\sqrt{2}) &lt; 0</math>.</p> <p>Rel min at <math>x = 0</math> because <math>f'(0) = 0</math> and <math>f''(0) &lt; 0</math>.</p>
